

A futuristic, metallic robot head with a human-like face, set against a dark background with glowing light streaks. The robot's head is white and metallic, with a human-like face. The back of the head is open, revealing internal mechanical components, including a circular fan-like structure with a glowing yellow center. The robot's neck is visible, showing a coiled spring and a thick, cylindrical base. The background is dark with horizontal streaks of light, suggesting a high-tech or futuristic environment.

# The Future of Feedback: AI in the Classroom

Derik Lema

# INTRODUCTION

- If a computer can instantly correct your grammar mistakes, could it also be a better teacher than a human?

# Benefits of AI Feedback

One of the main advantages of AI feedback is its efficiency. AI systems can handle repetitive tasks, like grading basic assignments, so teachers can focus on more complex interactions with students.

# Ethical Concerns

Privacy

Bias

# CONCLUSION

- AI can't replace teachers, it complements their role by providing immediate and adaptive support to students.
